# Annual Report 2022-23

## **VISION:** **HEMOPHILIA WITHOUT DISABILITY, CHILDREN FREE OF PAIN...!**

### **MISSION :**

- ❖ Reaching out People with Hemophilia (PwH) and other Related Inherited Bleeding Disorders.
- ❖ Providing Diagnosis, Treatment and Rehabilitation services.
- ❖ Training of Medical & Para Medical Professionals.
- ❖ Public / Media Awareness.
- ❖ Resource Mobilization to Sustain Welfare Activities.
- ❖ Advocacy with Government for its Involvement and Support.
- ❖ Networking with Like-minded organizations (like Disability, HIV/ AIDS, Blood safety...)
- ❖ Research and Development.

### **HEMOPHILIA ?**

Hemophilia is a congenital bleeding disorder caused by the deficiency of certain clotting proteins in the blood. Classical Hemophilia or Hemophilia - A is the commonest (80%) caused by factor VIII deficiency followed by Christmas disease or Hemophilia - B due to factor IX deficiency. Hemophilia is a complex disorder that can be associated with significant morbidity & lifelong treatment. Repeated bleeding into joints & muscles can lead to the development of chronic joint disease. These

individuals may suffer from joint pain, loss of range of motion & crippling musculoskeletal deformity & disability, all of which impair their quality of life & have implications on education, employment, productivity causing economical & psychosocial stress. The appropriate management of Hemophilia is key to minimizing & preventing long-term issues that can contribute to the higher cost. As per WHO, the prevalence of Hemophilia is estimated to be about 1 in 10,000 births, on that of severe form of the disease to be about 6 per 1,00,000. According to this, there are over 1,00,000 people with Hemophilia (PWH) in India & about 6000 PwH in Karnataka state but only about 20 % of them are identified & registered by Hemophilia societies.

**Karnataka Hemophilia Society, Davangere (KHS)** is a Non-Profit Organization working for the welfare of PwH and related Bleeding Disorders since 1989-90. KHS is founded by Dr.Suresh Hanagavadi who himself is a Person with Hemophilia. His maternal uncle's death to life-threatening bleed for want of treatment made him to become doctor & commit towards establishing Hemophilia care services in Karnataka state. It is registered under Society's Act, 1960 and affiliated to Hemophilia Federation India, New Delhi, which is a satellite body of World Federation of Hemophilia, Canada. Karnataka Hemophilia Society has identified more than 900 Patients with Hemophilia & other Bleeding Disorders & providing Diagnosis, Treatment and Rehabilitation services to the patients referred from different parts of the state, mainly from the Districts of Central and North Karnataka.

## President Desk

**Dr. Suresh Hangavadi**  
President  
KHS, Davangere

Today, I stand before you to shed light on a pressing issue that touches the very core of our Hemophilia community. There are individuals who bravely confront the challenges posed by this condition in their routine life. These resilient souls embody the strength and determination that define our community.

Hemophilia, a lifelong incurable disorder, casts a shadow on the lives of those affected. Yet, within this struggle, we witness extraordinary tales of triumph. It is crucial for us to recognize them and support those who battle Hemophilia, fostering an environment of compassion, understanding, and inclusivity.

Our responsibility as a community is to ensure that People with Hemophilia have access to the necessary resources for proper treatment and care. Through education, awareness, and support programs, we can empower them to lead a quality life despite the challenges they face. I appreciate the efforts of all healthcare professionals who tirelessly work towards improving the lives of People with Hemophilia. Capacity Building programs are being organized at regional level to empower Clinicians, Pathologists along with Laboratory technicians & Nursing officers including Physiotherapists so as to improve the delivery of care services to our blood brothers. Advocacy with State Government for Prophylactic Treatment & availability of Non-Factor therapies to prevent disabilities & enable our Children to access to education which is crucial to get placed in gainful jobs & live dignified, respectful life. We need to prioritize for effective campaign for Job reservation under RPWD-2016.

As a President, I appreciate champion initiatives of KHS Team that promote awareness, enhance healthcare accessibility, and advance the overall well-being of People with Hemophilia. Together, let us build a community where everyone, irrespective of their health journey, is valued, supported, and given the opportunity to thrive. congratulate & appreciate our Youth Group, I Women's Group & Staff members under the able guidance of Dr Meera Hanagavadi & Mr Naveen Havali, Executive Officer, KHS, Davangere for the efforts in all levels of welfare services.

Thank you, and may our collective efforts lead to a brighter and more inclusive future.

Yes... Our commitment continues...!

## Vice President (Development) Desk

**Dr. B T Achyutha**

Vice President – Development  
KHS, Davangere

Very few N.G.O's have the foresight and the commitment to move towards the achievement of goals set by it. KHS is one of the very few NGOs who have incessantly strived hard not only achieve the targets set by it ,but also go well beyond them. Infact, the strategy planning team of K.H.S had ,two years ago, set itself 5 main projects to be completed in the 3 or 4 years time.I am very happy and proud to say that most of them were completed in a span of just two years- thanks to the support of many organisation's and individual donors. The arduous task is now to set the strategies for the coming years. Such is the enormous support KHS is garnering with each coming year! KHS campus is always abuzz with activities. In spite of umpteen number of them, there are atleast two activities worth special menton. Though blood donation is a routine activity of our blood bank, a special tinge was added to this activity this time. It was the voluntary blood donation by the Hemophilia families on world Hemophilia day. It was a unique activity worthy of praise and emulation. While most of the time they have been the recipients, it was heartening to note the initiative taken by them to donate. The other activity was the 5-day Hemophilia youth camp organized by the youth group during Dec 2023. The involvement of women's group and the youth group in the activities of KHS is commendable. With an eye on the future and with a vision of building future leaders this camp was organized. A large number of youngsters attended the program and were immensely benefited by it. It is undoubtedly the outstanding teamwork that has helped KHS to achieve all this. My hearty congrats and thanks to all the members of the team for their effort and contribution.

## Empowering Women for a Brighter Tomorrow : Transforming Lives of Women Through Microenterprise Grant

**Dr. Meera Hanagavadi**  
Clinical Psychologist  
& Honorary Administrator,  
President, Women's Group  
KHS, Davangere

Hemophilia carrier mothers carry the genetic mutation for hemophilia but typically do not show symptoms. However, there is a 50% chance they will pass the gene to their children. Sons who inherit the gene may have hemophilia, while daughters may become carriers. Women are highly victimised in the family & Karnataka Hemophilia Society Davanagere (KHS) is providing psychosocial support for women to overcome the stigma. We conduct regular camps & workshops for families to make them understand about the facts & live their life with confidence. Women empowerment is a vital aspect of societal progress, fostering equality and inclusivity. In the heart of our empowerment initiatives, the impact of microenterprise grants (MEG) has been profound. This year's Annual Report unfolds a narrative of empowerment, resilience, and progress as we delve into the stories of women whose lives have been transformed through the power of microenterprise. As we reflect on this year's journey, the impact of microenterprise grants is undeniable. Each grant represents not just financial assistance but a lifeline of empowerment, a chance for women to rewrite their stories and shape their destinies. KHS is struggling hard sincerely to rehabilitate & empower Hemophilia families sine 3 decades. KHS is successful in empowering 27 families with the support of SOL. Yes, Save One Life (SOL) with a mission of providing support and assistance to individuals has brought confidence in facing life's most challenging circumstances & made positive changes in them. SOL is an NGO & through scholarships, sponsorships and MEG, it has illuminated the path to a brighter future for many individuals, empowering them with the tools to break the cycle of poverty. SOL has created MEG support program to help patients & families with bleeding disorders in developing countries to create small businesses. By offering financial assistance, we have witnessed lives being reshaped. Empowered individuals become not just recipients of aid but contributors to their communities. We extend our deepest gratitude to our supporters, partners, our staff members and dedicated team members for their support to conduct various welfare activities. Together, we have saved many individual lives, we have made their dreams come true and the potential for a brighter future. In the symphony of compassion, we & SOL continues to play a pivotal role in rehabilitating & improve their quality of life. Each act of kindness, each opportunity provided, is a melody that resonates far beyond the immediate moment. As we turn the pages of this Annual Report, let us carry forward the spirit of hope and healing, knowing that, indeed, we have the power to save one life at a time.

## Dr. Shakila N

Deputy Director

State Blood cell, National health Mission,

Department of Health and family welfare Services

Hemophilia being a lesser-known genetic disorder needs a focussed and sincere effort to both create awareness and train the concerned health personnel. The disease being a low burden high-cost disease the interventions from the government are many a times constrained. This is when organisations like Karnataka Haemophilia Society Davangere join hands with the government to fill in the gaps in giving a continuum of care to the often-neglected group of patients. In this direction KHS had organized Capacity Building Program - 2 days Hands on training for Clinicians, Pathologists, Laboratory Technicians, Nurses & Physiotherapists at all District Hospitals in the month of February, 2023 (weekly) to empower them with Diagnosis & Management Skills to improve the quality of Haemophilia care.

The 2-days training on haemophilia was a well-structured program imparting practical skills for Physicians & Paediatricians in Diagnosis & Management, Laboratory Diagnostic skills for Pathologists, Laboratory Diagnostic skills for Laboratory Technicians, practical skills to Staff Nurses & Promoting coordination of comprehensive Haemophilia care and practical skills in Rehabilitation for Physiotherapists. It was a comprehensive workshop encompassing all cadre of health personnel involved in haemophilia care. The arrangements at the training venue were well planned. The response to the training from our district hospitals was very good and there was a strengthening of their skills. The two-day workshop was inaugurated by one of the philanthropists Smt. Kiruvadi Girijamma who is also the Honorary President, KHS. She recalled the initial days of struggle in setting up this centre for PWH. In this regard Dr Suresh Hanagavadi and their team have left no stone unturned in successfully establishing this centre with support from philanthropists and government. This Workshop is one of the many activities they undertake in striving to make the lives of PWH better. haemophilia care is not only medical treatment but needs a holistic approach with both medical and paramedical care which this centre is providing. Patients from across many districts avail the services from this centre. I would like to congratulate Dr Suresh Hanagavadi and team for organising this very important training for all our district hospital personnel and wish him all the best in his future endeavours and look forward to collaborating on behalf of the government to give a dignified and quality life to persons with Haemophilia.

“PlasmaGen Biosciences is an Indian Biopharmaceutical Organization specializing exclusively in Plasma Protein derivatives and Specialty Care Therapies, headquartered at Bengaluru - India.

We are working in the field of Plasma Derived Medicinal Products (PDMPs). Most of the blood banks across India practice Blood Component Therapy, Where a huge quantity of Plasma is produced as a by-product. This plasma in its native form as a very limited clinical value and therefore, a large part of plasma remain un-utilized and this plasma is called as Recovered Plasma. This plasma is used for manufacturing many plasma products.

We collect this plasma and get fractionated into these lifesaving products – PDMPs. These therapies are – Albumin, Immunoglobulins, Factor VIII, Fibrinogen, Factor IX etc. Converting plasma into product is a very complex process, called as Plasma Fractionation.

We are fully Committed to make difference in the lives of patients, who are dependent on PDMPs for their survival. Our aim is to make entire Southeast Asia self-reliant for plasma products and improve access for safe PDMPs by creating more awareness for blood donation, practicing blood component therapy, and making use of plasma for fractionation to produce PDMPs”.
